Clinical reasoning in pain - emotions | HealthSkills Blog

Clinical reasoning, lower back pain. Back pain can originate from the spinal cord, the nerve roots, the vertebrae column, the surrounding muscles and ligaments, or even extra-skeletal structures such as abdominal aorta.

My clinical reasoning process when treating patients with aflexion control impairment component.

A flexion control impairment component. When lumbar spine is loaded (e.g. simulated lifting) his pain is increased. When he actively posteriorly tilts his pelvis (i.e. anterior pelvic) in this position his pain is significantly lessened (60% less), but not completely i.e. suggestive of a flexion control impairment component.

Clinical Reasoning In Spine Pain Volume II: Primary ...

Here is a short version of my thought process when treating patient with low back pain: Low back pain has a good prognosis. 90% don't take sick leave from work. 10% do take sick leave, is ½ back to work within 4 weeks. You can tell patients that to start, first screen for redflags.
